

Clamps for Metal Roofs

Attach solar systems, fall protection, walkways, guardrails and more on the seam of metal roofs
Solid – Safe - Simple

- Form lock and peak traction for high holding strength
- Premounted grub screws for quick and easy installation
- Flexible and fast production for short delivery terms
- Extensive tests on various seams

DS-Clamps

For double folded standing seams made of titanium zinc, aluminium, stainless or galvanized steel

R-Clamps

For various round bulb seams such as Kalzip, Bemo, Aluform or RIB-ROOF Evolution

M-Clamps

For snap lock seams and a large variety of industrial seams requiring a larger opening slot.

Different clamps for various applications

Clamps with 2 grub screws for applications requiring very high holding strengths and/or torque capability - standard with threaded hole M10 on top, bolt M10 upon request.

Mini-Clamps for mounting systems in solar industry or for other applications, using a group of clamps for the installation – standard with one grub screw and one threaded hole M8 on top, delivery with or without bolt M8.

Medi-Clamps with a clip were developed for rail systems with a lateral screw channel. The premounted clip ensures an extremely quick and easy installation of the rails.

Our advantages – your benefit:

- Customer Focus:** We provide consulting and fast delivery from our warehouse and nearby production facilities.
- Flexibility:** Special drilling, special length of the clamps or even a special type of clamp – do not hesitate to ask us.
- Practical Orientation:** Metric threads – no special tools required. All the grub screws are premounted for quick and easy installation.
- Easy Processing:** Packaging units are 50 pieces for all the clamps. This simplifies your calculation, your orders and the handling on the construction site.
