

## System description

GARDCO ALF is a railing system fixed to the parapet or other horizontal surfaces to secure flat roofs that are not accessible to the public against falling.

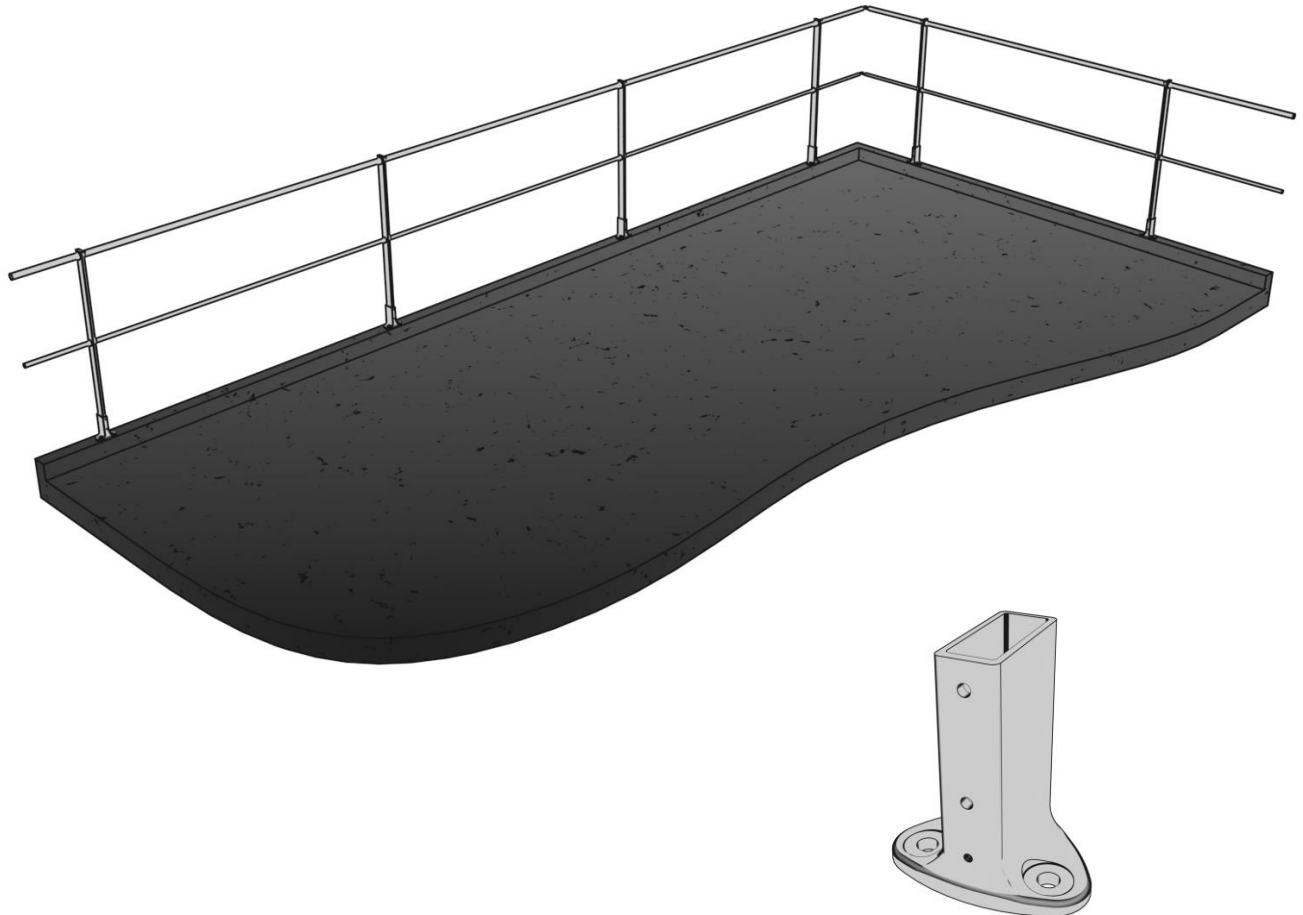

It is attached using brackets that are anchored to the substrate. This eliminates the need for cantilevers that protrude into the roof surface and obstruct the installation of photovoltaic systems, for example.

GARDCO ALF is tested in accordance with DIN ISO 14122-3 (maximum post spacing 1.50 m) and DIN EN 13374 Class A (maximum post spacing 2.50 m).

The advantages of GARDCO ALF:

- No outriggers on the roof surface
- Post spacing up to 2,5 m
- Quick installation
- Aluminium material. Not susceptible to corrosion

**Fasteners on site!**

GARDCO ALF is available with different post variants such as straight or inclined as well as hinged railings.

The railing can also be colour-coated to blend in with the visual appearance of the building.

We would be happy to advise you on this and look forward to hearing from you.
